## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. **Claims 1-16** are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, 9-23 of U.S. Patent No. 7,001,355 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both claim an ultrasonic applying apparatus with the same elements of a housing, driver circuit, vibrator element, horn, load detecting circuit, control circuit, motion detecting circuit, circular central opening disc piezoelectric element with an upper and lower electrodes.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. **Claims 1 and 13-16** are rejected under 35 U.S.C. 102(b) as being anticipated by Akisada (US 6,183,426 B1). Akisada discloses a device to apply ultrasound to the skin comprising a housing (fig. 1 element 10), a driver circuit (fig. 1 element 20), a vibrator element (fig. 1 element 11), a horn (fig. 1 element 12) that is formed as an integral part with a rim (fig. 13 element 16E) creating a cavity (restrictor) (fig. 13 are between element 11E and 150) and carrying the vibrator on a mounting face which is capable of giving a first electrically equivalent impedance when loaded by the skin, and a second impedance when unloaded, a load detecting circuit (fig. 1 element 40) which is capable of providing a signal when detecting load, a control circuit (fig. 1 element 80) which is capable of stopping or reducing the driver circuit when the load detection is not received within a predetermined time period, and a motion detecting circuit (fig. 1 element 50) which is capable of monitoring movement of the vibration element (abstract). The ultrasonic device comprises a combined vibration mass as shown in fig. 13 comprising a structure 150 that restrains vibrations at a center portion (structure 150 is a ring, having a center hole).
